

Guidelines for busses/coaches for COVID-19

Control measures for COVID-19

1. On shorter routes (driving within the city or towns) face masks are required for the duration of the trip.
2. On longer routes face masks are required while passengers are walking to and from the seat. Passengers may remove the mask as soon as they have taken their seats.
3. Children born in 2005 and later are excluded from wearing masks.
4. Guidelines and signs for COVID-19 from the Directorate of Health should be visible at the entrance of the coach/bus (see below). (Available both in Icelandic and English).
5. Hand sanitizer should be available by the entrance and passengers should clean their hands when entering the coach/bus.
6. Passengers should enter and exit the vehicle calmly and keep appropriate distance from others.
7. Passengers should respect physical distance when seated, as much as possible. People travelling together are allowed to sit together.
8. A bus/coach may only carry half of the number of passengers their license is issued for. A bus/coach with a license for 40 passengers can only carry a maximum of 20 passengers etc.) This does not apply on shorter routes but then a mask is required for the duration of the trip.

Við tiltekna aðstæður eykst smíthættu COVID-19

L

Léleg loftræsting

M

Margmenn

N

Náin samskipti

Áhættan er meiri þar sem þættirnir skarast
Þóssum upp á hvert annað og lægmörkum smíthættuna með því að forðast lokuð rými, mannþröng og návígi.

Hvað getur þú gert?

Forðastu mannþröng og tæmraðu vana þína í lokuðum rýmum.

Haltu viti (þíslag) frá öðrum.

Ef þú hefur tökk, opnaðu glugga og hafiðu fyrir hendi loftræstingu.

Þvoðu hendurnar og hafiðu fyrir viti þegar þú heitar eða hveinar.

Vertu með gítnu þar sem við eru þegar ómögulegt er að halda rétt þíslag.

AVOID
IKLMN PCI OQR

The risk of COVID-19 infection increases under certain circumstances

P

Poor ventilation

C

Crowds

I

Intimate gatherings

The risk is greater where the factors overlap
We must take care of one another and minimise the risk of infection by avoiding poorly ventilated spaces, crowds and intimate gatherings.

What can you do?

Avoid crowds and limit your stay in poorly ventilated spaces.

Keep the correct distance from others.

Open windows and doors for better ventilation if you can.

Wash your hands and cover your mouth and nose when coughing or sneezing.

Wear a mask where appropriate or in situations where you cannot maintain the correct distance.
